Work Experience

Experience sections to the job description. Don't use up too much of your space detailing that aren't relevant to the job for which you're applying. Study the job listing to figure out what is important to the hiring manager. Use important resume keywords and accomplishments that demonstrate your ability to execute.

Location MM/YYYY-Present

Skills and keywords found in the job description right into your resume. Continue to add details that you actually possess the skill. For example, if you mention a piece of software like AutoCAD, mention the types of projects it was used for.

Location MM/YYYY-Present

Make sure to be able to get an idea of why you move from company to company. Demonstrating increasing impact and responsibility from job to job shows the recruiter that you're capable of taking on more and more and gives them an idea of where your career is heading.

Job Title

You don't need to include every job you've ever had on your resume. Stick to the jobs that are most relevant and demonstrate your career trajectory. For example, if you are a Project Manager, you probably don't need to mention the supermarket job you had as a teenager.
